

Brain Dump

From memory — no peeking. Then check with the cheat sheet and fix in a different color.

Date: _____

Parallelogram

draw it · mark the height $\perp$ · write the formula

Triangle

draw it · mark the height $\perp$ · write the formula

Trapezoid

draw it · mark the height $\perp$ · write the formula

Weird shape — split $+$ or subtract $-$

draw it · mark the height $\perp$ · write the formula

Perimeter vs Area, in my words:

Fresh copy each day: ☐ Sun/Mon ☐ Tue ☐ Wed ☐ Thu · 15–20 minutes, then practice

Copy It By Hand

Look, cover, copy. Draw the sketch AND write the formula. Say it out loud while you point.

Date: _____

★ Only the numbers change. The formula for each shape never does.

Model

My copy (sketch + formula)

★ **perimeter, always: add every outside side**
Perimeter = fence AROUND → units
Area = carpet INSIDE → units²

★ **every parallelogram, always**
A = b × h
 slide the slice → rectangle

★ **every triangle, always**
A = ½ × b × h (b × h ÷ 2)
 half a parallelogram

★ **every trapezoid, always**
A = ½ × (b₁ + b₂) × h
 add the parallel sides, × h, ÷ 2

Height = square corner ⊥
 slanted side → **perimeter only**

★ **weird shape, always**
Split + pieces and add, or **big – cut-out –**
 missing side = long – short

Exam Checklist

Read it out loud before the test. Use it on every problem.

Date: _____

1

Fence or carpet?

Around → Perimeter (units). Inside → Area (units²).

2

Trace the height

Re-draw the shape. Find the square corner. Ignore the slanted side.

3

Divide by 2?

Triangle or trapezoid → yes, $\frac{1}{2}$ ($\div 2$).

4

Estimate first

Triangle < the rectangle around it. Does my answer make sense?

5

cm²

Units / square units

cm for perimeter · cm² for area.

★ Only the numbers change. The formula for each shape never does.

Perimeter tip: finger-trace the outline and tick each side (L-shapes have 6). Inside lines don't count.

Coordinates: length = big – small. Slanted side? You can't count squares — box it and subtract the corners.

4-day plan (15–20 min): Sun/Mon: brain dump → 6 mixed problems · Tue: brain dump → Spot the mistake · Wed: brain dump → weird shapes + copy the cheat sheet · Thu: brain dump → Test mode → read this checklist. No new material Thursday night.

Exam-Style Mix

Write your plan first (which formula? which numbers?). Then solve with units.

Date: _____

1

Find A and P

side = 7.5 cm
(perimeter only)

My plan: _____

A = _____ P = _____

2

Find A

My plan: _____

A = _____

3

Find A

My plan: _____

A = _____

4

Find A and P

My plan: _____

A = _____ P = _____

5

Find A

My plan: _____

A = _____

6

Find A

My plan: _____

A = _____

Answer Key — Exam-Style Mix

Check your plan too: did you pick the right formula and the right height?

Date: _____

#	Answer	Work
1	A = 54 cm²; P = 33 cm	$A = b \times h = 9 \times 6 = 54$ (7.5 not used). $P = 9 + 7.5 + 9 + 7.5 = 33$
2	A = 24 m²	$A = \frac{1}{2} \times 6 \times 8 = 24$ (height outside)
3	A = 55 in²	$A = \frac{1}{2} \times (14 + 8) \times 5 = \frac{1}{2} \times 22 \times 5 = 55$
4	A = 88 ft²; P = 42 ft	Missing sides: $9 - 5 = 4$, $12 - 7 = 5$. Split: $7 \times 9 + 5 \times 5 = 63 + 25 = 88$ (or $12 \times 9 - 5 \times 4 = 108 - 20 = 88$). $P = 7 + 4 + 5 + 5 + 12 + 9 = 42$
5	A = 70 yd²	$A = 10 \times 5 + \frac{1}{2} \times 10 \times 4 = 50 + 20 = 70$
6	A = 15 units²	$b = 7 - 1 = 6$, $h = 6 - 1 = 5 \rightarrow \frac{1}{2} \times 6 \times 5 = 15$
